

## **Onlays – A Paradigm Shift**

A CDE Programme was conducted by the Department of Conservative Dentistry And Endodontics, M.S.Ramaiah Dental College in association with ACE Bangalore on 20<sup>th</sup> October, 2011.

Indirect posterior metal restorations are time tested and popular among clinicians. The growing demand of patients for aesthetic restorations together with the ongoing interest of the dental profession for tissue preserving materials have led to the development of posterior adhesive restorations. It was clearly established, that a new bio mimetic approach to restorative dentistry is possible through the structured use of “tooth like” restorative materials, such as composite resins and porcelain.

The program highlighted various aspects of the current trends of metal and aesthetics onlays.

The symposium presented the

- GENERAL CONSIDERATIONS OF INDIRECT RESTORATIONS by Dr.Swaroop Hegde, Professor, Conservative Dentistry & Endodontics , M.S. Ramaiah Dental College
